

## *NuCelle® Gommage\**

### *Using NuCelle Gommage® Mandelic Serum & NuCelle Gommage® Emulsion*

\***Gommage** is a French term used in reference to rolling dead skin cells off the skin surface.

- Step One:** Cleanse area to be treated with **NuCelle® Mandelic Marine Complex® Wash**. Pat dry.
- Step Two:** Gently smooth **NuCelle® Gommage® Gentle Radiance Mandelic Serum (15%)** over freshly cleansed area to be treated. **DO NOT RUB INTO SKIN**. Let dry for several minutes.
- Step Three:** Lightly smooth **NuCelle® Gentle Radiance Gommage®** over the previously applied **NuCelle® Gommage® Gentle Radiance Mandelic Serum**. **DO NOT RUB INTO SKIN**. Let dry for several minutes. Rub a small section on the edge of the treated area. If the dead skin rolls off, continue the process and roll the entire treated area. If the dead skin does not roll off, wait a few minutes longer and try again. If applying to face or neck, hold skin taut, and gently roll skin between fingers, one small area at a time.
- Step Four:** Using a cotton pad or soft gauze, smooth **NuCelle® Mandelic Marine Complex® Toner** over face and neck. Allow to dry. Apply **NuCelle Gommage® Moisturizer** liberally over entire treated area.
- Step Five:** Apply **NuCelle® SunSense SPF30+** during the day.

This procedure may be used for any area of the body, especially feet, hands, and legs. The effects are beautiful.

#### **How The Process Works:**

The **NuCelle Gommage® Gentle Radiance Mandelic Serum** aids in exfoliation by dissolving the glue like substance which holds dead skin cells together. Application of the **NuCelle Gommage Serum** works to un-glye, and help detach the expired skin cells. The particles of paraffin in the **NuCelle Gommage® Emulsion** adhere to the dead skin cells thus enabling the expired cells to be rolled off without disruption or damage to viable skin cells.
